Note: Wastes and hazardous wastes are regulated through current laws and regulations in BiH in the fields of urban planning, water protection, air quality protection, land use, environmental protection etc.

The most important current document at the state level in BiH is the Basel Convention that came in to force on March 16, 2001.

“Draft Environmental Protection Laws in BiH”-(New) have been prepared as part of EU PHARE Project are in parliamentary procedure for adoption including Law on waste management.

The Waste Management Law has 61 articles, while some twenty articles indirectly mentioned hazardous waste.

Article 60 of the Law list other articles requiring preparation of special regulations (secondary laws) aimed at the implementation of the Law.

The national regulation is on base lists of Basel Convention (Annex VIII i Annex IX), until preparation national lists for waste.

The waste contained in Annex IX (List B wastes) is not considered in Bosnia and Herzegovina as hazardous waste and imports are controlled based on national regulation (request for issuing waste export and import permit) . In cases if wastes contain Annex I material to an extent causing them to exhibit an Annex III characteristics the relevant provisions of Basel Convention must be applied.

Until these days country has not import of such wastes except iron, copper, aluminium, zinc, tin and lead wastes, with scope of exportation of such materials as row materials.

Recycling capacity for waste in country currently non-existent.

OBSERVATIONS:

1. In Costa Rica the current legislation related with this topic is according with the Basel Convention regulations and for that, we don't have additional regulation.
2. There is no control procedure for the import of the above mentioned materials, and for that reason are not controlled during a transboundary movement and follow the normal commercial transitions. However we try that the notification procedure is applicable in such cases.
3. Our Government is currently doing some efforts in order to incorporate the necessary items that allow us put in practice these controls in conjunction with the Customs Authorities.

General comments:

- (1): - The information given is with reservation. No legal validity can be claimed from this publication.
- Whether a waste is considered to be dangerous or not is regulated by the European Waste List (Decision 2001/118/EG). Because companies know best what is the specific composition of the waste, they should apply art 2 of this decision to decide on hazardous or non-hazardous.
- The remarks in box 2a and box 2b are explained in box 4.
- Only if box 2.b is ticked no notification procedure is required for shipments for recovery (OECD - Green Listed Waste procedure). For the correct import procedure use the Council Regulation (EEC) No 259/93. Information can be obtained from the competent authority (tel.nr.: 31.348.487.440).
- Import prohibitions are regulated by the National Waste Management Plan 2002-2012.
