## Annex

### Capacity-building and training activities undertaken and planned by the Secretariat in the biennium 2016–2017

1. While addressing many of the technical assistance needs in a joint manner<sup>1</sup>, the Secretariat undertook the following activities in 2016:

(a) New and existing training and capacity-building materials have been developed or updated and presented as modules. The Secretariat has also advanced on creating a single, user-friendly, simple, easy-to-access entry page for modules on the synergies website and generated a database to compile and organize the materials and provide a searchable interface. The modules completed so far are available on the synergies website;<sup>2</sup>

(b) Webinars have been further developed and new avenues for the delivery of technical assistance have been identified, including the use of other available online tools such as the Massive Open Online Courses (MOOC). The first MOOC on the e-waste challenge was launched in April 2016, in cooperation with academic institutions. Toolkits and e-learning courses for dissemination of training materials have been upgraded and widely used;

(c) Parties and stakeholders have been trained on specific issues of the conventions as well as on cross-cutting issues, information and knowledge sharing have been undertaken on guidance documents and technical guidelines and exchanges of best practices and lessons learned have been facilitated. Training workshops at the global, regional and national levels were organized in close cooperation with the Basel and Stockholm conventions regional centres, the United Nations Environment Programme (UNEP) regional offices, the Food and Agriculture Organization of the United Nations (FAO) country, regional and subregional offices and other organizations;

(d) The Secretariat has addressed requests for assistance expressed by Parties, including through facilitating assistance between requesting Parties and potential providers of the assistance, and supported the implementation of national activities with an active involvement of the Stockholm and Basel conventions regional centres, FAO country offices and of national non-governmental organizations (NGOs);

(e) The regional delivery approach has been strengthened by collaborating closely with the regional centres, as well as the UNEP and FAO regional and subregional offices, for instance by strengthening existing partnerships with the regional centres and NGOs;

(f) The Secretariat has continued to strengthen its cooperation, including through specific partnerships, with relevant intergovernmental organizations and participated actively in partnerships and initiatives led by others. Partnerships with academic institutions and universities were further strengthened and new partnerships were identified and launched, among others with the UNESCO Institute for Water Education and the European Institute of Innovation and Technology to raise the profile of conventions-related environmental pollution, hazards, occupational safety and health issues in education programmes;

(g) Partnership activities specific to the Basel Convention included facilitation of activities of the Partnership for Action on Computing Equipment (PACE), the Environmental Network for Optimizing Regulatory Compliance on Illegal Traffic (ENFORCE), and the informal group on household waste which has developed a draft concept note and workplan for a household waste partnership;

(h) The Secretariat has continued to strengthen its cooperation through specific joint programmes with other units within FAO and UNEP, such as the FAO programme on disposal and prevention of new accumulation of obsolete stocks of pesticides, programmes on integrated pest management as alternatives to chemicals covered under the conventions, capacity-building projects on multilateral environmental agreements in African, Caribbean and Pacific countries and activities to protect vulnerable groups such as women and children;

- (i) The Secretariat of the Rotterdam Convention continued to collaborate with the Social Protection Division in FAO and International Labour Organization (ILO) to develop new tools for the protection of children and youth from hazardous pesticides' use in agriculture.
2. Feedback received from Parties and observers with regard to online and face-to-face training and other activities shows that participants have appreciated support provided to them, but also expressed the need for further interaction between experts from developed and developing country Parties on issues within the scope of the conventions and for experience sharing on the implementation of the conventions among Parties. The identification of best practices under the three conventions at the national level is a key element for the success of the activities as it brings forward the need for more focused training and the possibility to use them in the context of South-South cooperation and assistance.
3. In many ways, the implementation of the technical assistance programme has been very successful in the current biennium. Challenges faced were the shortfall in voluntary contributions to more fully implement the programme and the delays in finalizing the technical assistance section of the website due to limited human resources.
4. In order to assess the impact of the technical assistance activities, the Secretariat carries out routine evaluations of specific online and face-to-face training activities and keeps track of the possible impact of technical assistance activities on Parties' implementation of the obligations under the conventions, and requests for follow up activities. The overall assessment of the impacts of the technical assistance programme would benefit from being further improved.
